

Extension Installation

Hardware Type: Pella Active

Remove the escutcheon plate from the door and save the screws. Using snap ring pliers, remove the snap ring and nylon washer from the back of the escutcheon plate.

Using a thin blade (such as that of a box cutter), remove the nylon washer from the collar of the handle. Save the washer for later use.

Place a nylon washer on the end of the ENCI Extension.

Insert the extension through the hole of the escutcheon plate and place another nylon washer on the other side.

Again using snap ring pliers, install the snap ring back onto the escutcheon plate with the extension in place.

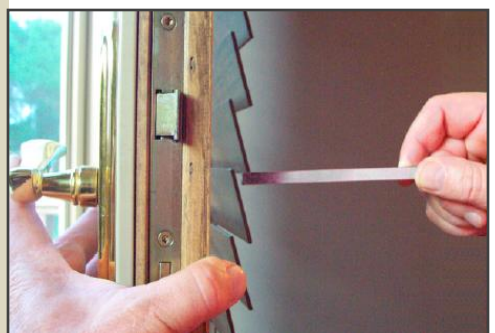

Lightly sand the collar of the door handle and inside the part of the extension that will connect to the handle. Place heavy beads of *Loctite* adhesive around both parts.

Firmly attach the door handle to the extension. Wipe off any residual glue. Since *Loctite* adhesive sets up in the absence of air, it is easily cleaned off.

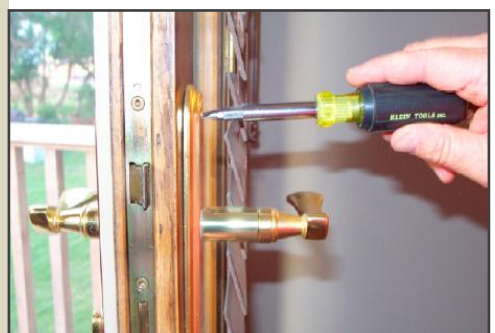

While holding the EXTERIOR escutcheon plate in place, insert the long spindle into the hole in the door corresponding with the handle.

Now attach the INTERIOR escutcheon plate onto the long spindle.

Replace the two screws you saved from STEP 1. Be sure to let the *Loctite* adhesive set overnight.
