

Extension Installation

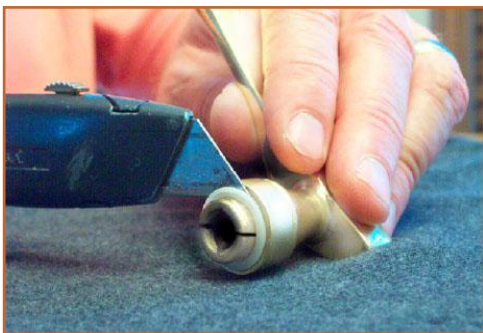

Hardware Type: Pella Dummy

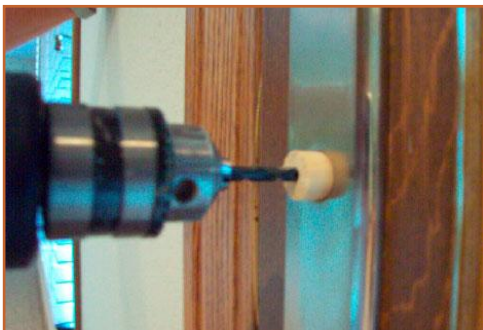

Remove the escutcheon plate from the door and save the screws. Stabilize the escutcheon plate and carefully protect the finish. Then remove the snap ring from the back of the escutcheon plate using the tip of a flathead screwdriver.

Again using the flathead screwdriver, remove the washer from the back of the escutcheon plate. Now remove the door handle.

Use the blade of a box cutter to remove the nylon washer from the collar of the handle. Save the washer for later use.

After replacing the escutcheon plate back on the door, insert the wooden centering piece included in the ENCI Extension kit. Drill a 3/16-inch pilot hole completely through the door. Be sure to keep the drill level and straight.

Remove the wooden centering piece. With a 7/16-inch bit, drill a hole just past halfway through the door. Now finish drilling the 7/16-inch hole from the other side of the door.

Insert the ENCI Extension into the escutcheon plate. The nylon washer you saved from the door handle collar (SEE STEP 3) may be used on the tip of the extension piece.

On the back of the escutcheon plate, place the washer from the ENCI Extension kit onto the end of the extension. Use snap ring pliers to install the snap ring while holding the extension in place.

With a piece of sandpaper, lightly sand the collar of the door handle and inside the part of the extension that will connect to the handle. Place heavy beads of *Loctite* adhesive around the handle collar and inside the extension.

Firmly attach the door handle to the extension. Wipe off any residual glue. Since *Loctite* adhesive sets up in the absence of air, it is easily cleaned off.

Insert the spindle from the ENCI Extension kit through the door and into the escutcheon plate. Mount the escutcheon plate back onto the door with the saved screws.
